FETA MOZZERELLA COLBY JACK NONE

Cheese Tasting & Data Collection Activity

1. Step 1: Sample the Cheese

- Allow students to try each type of cheese.
- Encourage them to notice the textures, smells, and tastes of each one.

2. Step 2: Choose a Favorite

- Students vote on their favorite cheese. Voting options could include:
 - Tally marks under each cheese name on the whiteboard.
 - Sharing out loud which cheese they liked best and one reason (texture, taste, smell, etc.).
 - Raising hands while the teacher counts and records results.

3. Step 3: Record the Data

- As votes are collected, students will help transfer the results into a bar graph.
 - This could be done as you go or after the final numbers are in.

4. Step 4: Analyze the Results

- Discuss questions such as:
 - Which type of cheese was the class favorite?
 - Which was the least favorite?
 - Were you surprised by the results?
 - How many people agreed with your favorite?
 - How does the bar graph make the results easier to see than just looking at the tallies or list?
